

2021 March *Guess that Plant*

Carex platyphylla Carey; Broadleaf Sedge

The March *Guess that Plant* was the native sedge known as the broadleaf sedge. Our monthly plant is found throughout New Jersey's Piedmont, Highlands and Valley and Ridge provinces. It also has an unverified, historic record from Gloucester County. The plant prefers rich mesic woodlands and rocky slopes. The photo above was taken on such a rich, forested, rocky slope in Hunterdon County.
